Psychopy3 install instructions

Psychopy installation

Psychopy3 is required for some tasks, including SWB/happiness v4.0. The following steps will guide you through the process of downloading and installing it to run these tasks.

Psychopy installation

1. Navigate to <https://github.com/psychopy/psychopy/releases/tag/3.2.4>
2. Select Installer
 - a. [StandalonePsychoPy3-3.2.4-win64.exe](#) (Windows - preferred)
 - b. [StandalonePsychoPy3-3.2.4-MacOS.dmg](#) (Mac)
 - c. For Linux, you will need to Pip install the correct version (PIP) and download flywheel.
You can find the instructions here: <https://www.psychopy.org/download.html>, under the wxPython wheel section.
3. Follow the installer instructions, do not change directories.
4. Once installer is finished, you can use windows search bar to find Psychopy3. Open file location and move a shortcut to your desired location (e.g. Desktop) for ease of access.
5. Open Psychopy3. Builder, Coder and Experiment runner windows may open. You can close the Builder View.

Running tasks

1. In the Coder window, select File> Open or click on the folder icon.
2. Select the file for your task (typically a .py file) and click Open.
3. The file will appear in the Experiment runner window. Click on the green running man icon to start the task.
